

Sage Enterprise Intelligence is an intuitive business intelligence solution that integrates with Sage 300 ERP, Sage 500 ERP and Sage ERP X3, helping business users reduce time spent on analysis and reporting, and make faster, better-informed decisions. With the many new features and continued enhancements in this 7.0 release, there are now even more reasons to use Sage Enterprise Intelligence. Get up to speed today!

Feature highlights

New reporting options

- You can now have a report automatically sent as an alert by setting up pre-determined conditions such as long sales cycles, delays in shipments, or other metrics.
- Reports can now be sent by you on-demand before their scheduled times when immediate communication is needed.

New languages

- Spanish, German, Chinese simplified, and Chinese are now supported on a per-user basis, extending reach for international offices.

New security module

- Administrators can manage user security privileges using an easier, redesigned web interface. V5 Windows client is no longer required.
- Active Directory is supported for secured user single-sign on.

New process designer options

- Design time is faster with new options such as re-using the same table, joining values, choosing suggested table joins, or easily copying one process to the next.

Better options for customizing the dashboard

- More dashboard options allow you to filter down to more specific data.

Redesigned use of templates

- You can export and share report templates to better collaborate with others.

New Oracle database support

- Sage Enterprise Intelligence now can be installed with an Oracle database, extending database options.
