

How Will Warehouse Automation Improve Inventory Management at your business?

TIME & COST SAVINGS:

No more time wasted in correcting data entry errors or looking for items in the warehouse that don't exist.

The WMS system is self-checking, and will alert the user of a problem if it detects a transactional error in the system.

Knowledge of exact product codes and inventory locations equals faster order processing.

Over 99% order accuracy.

Outbound shipment volume increases by 15%.

Stage 1:

Accurate Transactional Data and No Data Entry Errors

Stage 2:

Increased Inventory Tracking Capabilities

Stage 3:

Accuracy & Efficiency Increases in Different Departments

A data entry error in one department will not carry forward to other departments (e.g. From receiving to picking).

You will know how many items are in each bin to avoid stock-outs or shipping out the wrong items.

Over 99% inventory accuracy.
(Real-time inventory updates)

Over 99% replenishment accuracy.

On average picking times are reduced by 20%.
